

Cupolas

SELECTING A CUPOLA

1. Choose a Style
2. Select the Right size - A good rule of thumb is a minimum of 1.25" inches of cupola for every foot of unbroken ridge line. For ridge lines longer than 48' consider using multiple cupolas. Three cupolas, with the center one being 25% larger, looks excellent!
3. Determine the base cut (based on your roof pitch)
Do you need an extension? Yes, if the pitch is greater than 10/12.
4. Consider options like finish, screening and paint!

These Cupolas come standard with a weathervane mount and accommodate up to a 10/12 pitch. For a steeper roof add an extension.
